MoU with Climate Heritage Network

Climate change is one of the most significant and fastest growing threats to people and their cultural heritage worldwide. Scientific evidence shows unequivocally that increasing concentrations of Greenhouse Gases (GHGs), driven by human activities such as burning of fossil fuels and deforestation, are accelerating climate change and its impacts, including sea level rise and coastal flooding, drought and extreme heat, and increased frequency and intensity of severe weather events.

IIC has signed an MoU with the Climate Heritage Network to help address these threats.
