

Solvent Use in Conservation

Submitted by Marina Herriges on 08 Apr 2024

Please fill in this survey examining our current solvent use in conservation before June 1st 2024!

Your anonymous responses will help us with the ongoing research into safer solvents for us, our cultural heritage and the environment.

For Sustainability in Conservation's Greener Solvents Project the Department of Art Conservation at the University of Delaware has created this survey to gauge the current use of solvents worldwide. The main aim is to examine organic solvent use in practice and to evaluate their environmental and personal impacts. A further aim is to ensure a pertinent focus for our continuing research into greener solvents with our industrial and academic partners, so that we can provide information as useful as possible to conservators. Your completion and further sharing of the survey is therefore much needed and appreciated.
